

EyeC Driver

for HYBRID Software

Integrate EyeC's PDF proofing technology **into your workflow**

Enhance your CLOUDFLOW

With the application, EyeC Driver, integrate our best-in-class pre-press inspection solution – the EyeC Profiler Graphic – into **HYBRID Software's CLOUDFLOW**. Check your pre-press files automatically – directly from your workflow system – for **simplified and enhanced quality control procedures**.

Integrated quality control

The EyeC Driver **boosts both security and efficiency**. The module allows you to **standardize your processes** and create as many inspection procedures as needed. The software can compare your files against the ones of your customers, one-up against step-and-repeat files or different versions of a file. **The integration triggers inspection procedures automatically, retrieving job data, files and inspection parameters from your workflow system**. You follow consistent control procedures without manual intervention.

Automated pre-press inspection

With the EyeC Driver, you **reduce the time spent on quality controls**. Your pre-press files are inspected and released automatically if they match the approved artwork. Pre-press operators **only have to intervene when deviations are detected**. A task appears in their workspace that opens the EyeC Profiler Graphic for an easy review of discrepancies.

Accurate and complete PDF check

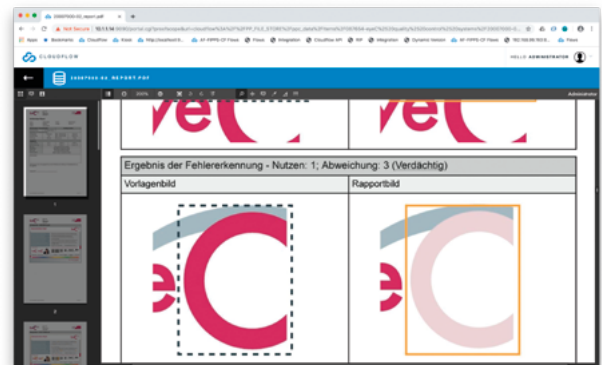

The EyeC Profiler Graphic verifies the entire content of your pre-press files against the approved artwork. **Text, graphics, Braille, 1D and 2D codes are checked graphically in a single inspection cycle**. Inspection results are reported back to the workflow system and deviations brought to the operator's attention. **Problems are caught right away** before any work is wasted on subsequent steps.

EyeC Driver

for HYBRID Software

Key features

- ✔ **Integrated quality control**
Manage and perform inspection processes from your workflow for maximum security and efficiency.
- ✔ **From semi to fully automated pre-press checks**
Streamline proofing tasks and cut quality costs.
- ✔ **Accurate PDF proofing**
Identifies mistakes before producing plates.
- ✔ **Checks against customer PDFs**
Ensures content conformity.
- ✔ **From one-up file to step-and-repeat file**
Verifies your complete pre-press process easily.
- ✔ **Multi-template inspection**
Checks combo jobs against several PDF files simultaneously.
- ✔ **Predefined parameter sets to select tolerance**
Adapts the inspection sensitivity to each job.
- ✔ **Automated control of layers and color separations**
Selects the content to be checked automatically.
- ✔ **Comprehensive inspection report**
Keeps track of inspection results and helps implement necessary changes easily.

Technical data

EyeC Driver		
Performance	Supported workflow systems	HYBRID Software's CLOUDFLOW
	Supported file formats	PDF, AI, TIFF, JPEG
	Resolution	up to 2400 dpi, typ. 600 dpi
	Pixel size	down to 10.6 µm (0.0004")
Requirements	Operating system	Windows based (64 bit). Windows 10.
	Networking	1 GbE

Options

- ✔ 1D code inspection (Barcodes)
- ✔ 2D code inspection (Data Matrix, QR Codes)
- ✔ Braille inspection
